

Based on the provisions of Article 13 of the General Tobacco Control Law and Article 8 of the Regulations of the General Tobacco Control Law, Japan Tobacco International Mexico, S. de R.L. de C.V. hereby provides the general public with information related to the content of its tobacco products, the ingredients used, emissions, and health effects.

According to the currently available scientific evidence, the ingredients used in the manufacture of our tobacco products do not increase the risks associated with their consumption, do not induce people to start smoking, and do not affect people's ability to quit smoking. The following list contains all the ingredients used in the manufacture of all tobacco products imported by Japan Tobacco International Mexico, S. de R.L. de C.V. into the United Mexican States. Not all tobacco products imported by Japan Tobacco International Mexico, S. de R.L. de C.V. contain all the ingredients mentioned in this list.

Aggregate list of ingredients contained in JTI's imported brands.

\*QNE - Quantity Not Exceeded

## Japan Tobacco International Mexico, S. de R.L. de C.V.

Information related to the minimum and maximum levels of nicotine, tar, and carbon monoxide\* emitted by the products imported by Japan Tobacco International Mexico, S. de R.L. de C.V. using the machine approved by the International Organization for Standardization (ISO) to measure tar, nicotine, and carbon monoxide in cigarette smoke\*\*.

	Minimum (mg/cig)	Maximum (mg/cig)
Tar	8	11
Nicotine	0,6	0,9
Carbone Monoxide	7	10

\* The information contained in this table is available on the packaging and exterior labeling of the relevant products.

\*\* It is widely acknowledged that the machine does not smoke in the same way people do. Additionally, people's smoking habits vary from one individual to another, and a smoker may even smoke differently in different circumstances. However, most governments around the world accept the method used by the machine to measure tar, nicotine, and carbon monoxide levels in tobacco smoke, which has been approved by the International Organization for Standardization (ISO).

While the standard method provides a consistent way to measure tar, nicotine, and carbon monoxide levels across various cigarettes, it is not possible to measure the individual levels of these components received by each smoker.

## EFFECTS OF TOBACCO CONSUMPTION ON HEALTH

- Japan Tobacco International Mexico, S. de R.L. de C.V. acknowledges that smoking causes serious diseases, including lung cancer, coronary heart disease, emphysema, and chronic bronchitis. JTI supports efforts to advise smokers accordingly. All individuals should be properly informed about the health risks associated with smoking.

- Japan Tobacco International Mexico, S. de R.L. de C.V. also recognizes that the risks associated with smoking can only be eliminated by completely avoiding the use of tobacco products for smoking.

- JTI Mexico supports the regulation of tobacco product ingredients, as long as it is consistent, scientifically sound, and necessary to meet valid regulatory objectives.

- Japan Tobacco International Mexico, S. de R.L. de C.V. reaffirms its commitment to continue working with the Federal Government on matters related to the overall regulation of the tobacco industry.
